WLTP

Under conditions defined by EU law, the Worldwide Harmonized Light Vehicles Test Procedure (WLTP) is a comprehensive laboratory test designed to determine a vehicle's fuel consumption, range, and emissions. This comprising a laboratory test (WLTC) and a practical driving test (RDE). During the WLTC test, the vehicle is driven on rollers for a total of 23 km at an average speed of 47 km/h, with four phases ranging in intensity from lowest to highest, the vehicle spends 13% of the test at rest. It is essential to note that the fuel consumption and range data reported during the standard cycle may differ from those achieved in actual practice due to several factors such as the physics of the car (aerodynamics, weight, rolling resistance), ambient conditions (weather and outside temperature), driver's driving style, and the road profile. Additionally, it should be noted that the WLTP test is performed with the air conditioning switched off. The WLTC test cycle remains a laboratory exercise designed to ensure that the figures reported are comparable. This enables consumer to make reliable comparison between vehicles in terms of the fuel consumption, range, and emissions. The WLTP data is solely for informative purposes and does not represent any guaranteed results. For further information, please visit <https://www.skoda.co.nz/owners/wltp>.

* Škoda driveaway pricing excludes any optional extras and any NZ Government Clean Car Programme (CCP) rebate or fee that may apply.

**Standard warranty. Other promotional offers may exceed standard terms, and if selected they would be added to vehicle price.

***New Zealand Government Clean Car rebates / fees may apply for new vehicles sold from the 1st April 2022. Values stated should be taken as guidance only and may be subject to change without notice. For further details, see [skoda.co.nz/clean-car](https://www.skoda.co.nz/clean-car)
